Question35:-Read the following passage and answer the question.

A report by investment bank Goldman Sachs 2021 states that the supply chain disruptions in the semiconductor industry have spillovers in over 169 industries. The manufacturing of semiconductors requires large amount of capital and has an average gestation period of 6-9 months. Moreover, it has a fairly long production cycle of about 18-20 weeks. Hence, any recovery from the supply chain disruptions will be a slow and costly affair. The report further stated that microchips and semiconductors account for about 4.7 per cent of value added by the automotive industry. With the delay in supply, the average lead time in the automobile industry for 2021 has been around 14 weeks globally. India has also experienced similar trends in the automobile sector. As per data from the Society of Indian Automobile Manufacturers (SIAM), carmakers sold 219,421 passenger vehicles in the domestic market in December 2021, down 13 per cent (YoY). This is not a demand problem but a supply-side issue. The information from various car manufacturer's websites reveals a cumulative pendency of over 7 lakh orders, as of December 2021.

Carmakers sold only 219421 vehicles in Indian Market in December, 2021, down by 13 percent (YoY) because of.....

- A:-Reduced demand due to covid-19 pandemic movement restrictions
- B:-Reduced demand because people don't have money to purchase car
- C:-Automobile industry could not supply enough cars because of shortage of semiconductors.
- D:-Reduced supply because car manufacturers are closing down factories because of covid-19 pandemic
- Correct Answer:- Option-C

Question36:-Read the following passage and answer the question.

As per Indian Economic Survey, the agriculture and allied sectors grew at a positive growth rate of 3.6 per cent during 2020-21. This became possible due to good monsoon and various government measures to enhance credit availability, improve investments, create market facilities, promote infrastructure development in the agriculture sector and increase provision of quality inputs to the sector. The timely intervention in the form of Atma Nirbhar Bharat (ANB) Abhiyan coupled with other growth promoting schemes have further helped agriculture to achieve an improved growth of 3.9 per cent in 2021-22.

What is the main reason for the positive growth rate of agriculture and allied sectors in 2020-21?

- A:-There was inadequate monsoon rain but government has not taken enough steps to enhance credit availability so as farmers can purchase agricultural inputs
- B:-There was good monsoon but government did not take steps to provide quality inputs on time
- C:-There was good monsoon and government has taken steps to enhance credit availability, improve investments, create market facilities, promote infrastructure development in the agriculture sector
- D:-Indian agriculture is deeply depended on good monsoon for its performance

Question37:-Read the following passage and answer the question.

RBI reports that now two years later, as we were emerging out of the pandemic situation, the global economy has seen tectonic shifts beginning 24th February, with the commencement of the war in Europe, followed by sanctions and escalating geopolitical tensions. We are confronted with new but humungous challenges – shortages in key commodities; fractures in the international financial architecture; and fears of deglobalisation. Extreme volatility characterises commodity and financial markets. While the pandemic quickly morphed from a health crisis to one of life and livelihood, the conflict in Europe has the potential to derail the global economy. Caught in the cross-current of multiple headwinds, our approach needs to be cautious but proactive in mitigating the adverse impact on India's growth, inflation and financial conditions. We are, however, reassured by the strong buffers that we have built over the past few years, including large foreign exchange reserves, significant improvement in external sector indicators and substantial strengthening of the financial sector, all of which would help us to weather this storm.

What should be India's approach to deal with the situation of commencement of the war in Europe?

- A:-We should import and hoard crude oil as much as possible
- B:-We need to be cautious but proactive in mitigating the adverse impact on India's growth, inflation and financial conditions
- C:-We should ensure that war comes to an end at the earliest
- D:-We should close down our financial dealings to reduce our exposure to global economy
- Correct Answer:- Option-B

Question38:-Read the following passage and answer the question.

Indian Economic survey discusses two approaches namely Agile approach and waterfall approach. The Agile approach is a well-established intellectual framework that is increasingly used in fields like project management and technology development. In an uncertain environment, the Agile framework responds by assessing outcomes in short iterations and constantly adjusting incrementally. It is important here to distinguish Agile from the "Waterfall" framework which has been the conventional method for framing policy in India and most of the world. The Waterfall approach entails a detailed, initial assessment of the problem followed by a rigid up-front plan for implementation. This methodology works on the premise that all requirements can be understood at the beginning and therefore pre-commits to a certain path of action. This is the thinking reflected in five-year economic plans, and rigid urban master-plans.

What is the main difference between agile approach and waterfall approach?

- A:-Agile approach is very flexible and waterfall approach is rigid
- B:-The problem is initially assessed in the agile approach whereas it is not so in the waterfall approach
- C:-Waterfall approach is used in the uncertain environment and agile approach is used mostly in the conventional policy making
- D:-Agile approach is not good for urban master plans whereas waterfall approach is very amenable for it.
- Correct Answer:- Option-A

Question39:-Read the following passage and answer the question.

Finance commission report states that the level of development of a state is a function of complex factors, which include historical, cultural and sociological characteristics. Additional financial resources are certainly needed to help a state develop, but the ability to effectively use those resources is undoubtedly more crucial, and is a distinctive feature visible across states. Poor administration and weak institutions in a state, for example, clearly under optimise allocated resources. This Commission seeks to harmonise the principles of expenditure needs, equity and performance in determining the criteria for horizontal sharing by broadly assigning appropriate weightages. The need-based principles would clearly include the criteria of population, area, forest and ecology. The equity- based principles envisage income distance which, as in the past, continues to be assigned high weightage. In respect of the performance criteria, we have assigned weightages to demographic performance as well as tax and fiscal efforts.

What are all the major reasons for the underutilization of allocated resources by the States?

- A:-Political instability
 - B:-Lack of political will
 - C:-Poor administration and weak institutions
 - D:-States are not having enough needs to spend the resources
- Correct Answer:- Option-C

Question40:-Read the following passage and answer the question.

Finance Commission report states that the pandemic has also created new challenges in the field of education for our young learners. State Governments across the country shut down schools and colleges as an immediate measure to slow the spread of the pandemic. The state governments shutdown schools and colleges to.....

- A:-Prevent students from learning
 - B:-Prevent the students from appearing exams
 - C:-Slow the spread of the pandemic
 - D:-Completely eliminate covid-19 disease
- Correct Answer:- Option-C

Question41:-Read the following passage and answer the question.

Organic Agriculture should sustain and enhance the health of soil, plant, animal, human and planet as one and indivisible. This principle points out that the health of individuals and communities cannot be separated from the health of ecosystems - healthy soils produce healthy crops that foster the health of animals and people. Health is the wholeness and integrity of living systems. It is not simply the absence of illness, but the maintenance of physical, mental, social and ecological well-being. Immunity, resilience and regeneration are key characteristics of health. The role of organic agriculture, whether in farming, processing, distribution, or consumption, is to sustain and enhance the health of ecosystems and organisms from the smallest in the soil to human beings. In particular, organic agriculture is intended to produce high quality, nutritious food that contributes to preventive health care and well-being. In view of this it should avoid the use of fertilizers, pesticides, animal drugs and food additives that may have adverse health effects.

What is health?

- A:-Absence of illness only
 - B:-It is the wholeness and integrity of living systems
 - C:-Immunity, resilience and regeneration
 - D:-State of well being
- Correct Answer:- Option-B

Question42:-Read the following passage and answer the question.

Franchising is a system for selectively distributing goods or services through outlets owned by the franchisee. Basically, a franchise is a patent or trademark, license, entitling the holder to market particular products or services under a brand name or trademark according to prearranged terms and conditions. The franchiser is the owner of his or her own business (the franchisee) is likely to be more diligent and strive harder for success than the hired manager of a company-owned outlet. Since franchising is form of selective distribution, the typical franchise agreement prohibits the franchisee from setting up competing outlets within the franchise area.

What is the main advantage of Franchising model of business?

- A:-The franchiser is the owner of his or her own business (the franchisee) is likely to be more diligent and strive harder for success than the hired manager of a company-owned outlet.

Question43:-Read the following passage and answer the question

IMF'S World Economic Outlook, April 2022, reports that in many countries, inflation has become a central concern. In some advanced economies, including the United States and some European countries, it has reached its highest level in more than 40 years, in the context of tight labor markets. There is a rising risk that inflation expectations become de-anchored, prompting a more aggressive tightening response from central banks. In emerging market and developing economies, increases in food and fuel prices could significantly increase the risk of social unrest.

The high inflation may lead to.....

- A:-Central banks to act very aggressive and increase money supply in the economy
 - B:-Central banks getting angry and ban the trade
 - C:-Central banks to act aggressive and decrease money supply in the economy
 - D:-Central banks asking people to protest in the street
- Correct Answer:- Option-C

Question44:-Read the following passage and answer the question.

World Trade Report, 2021 while discussing the role of trade in economic resilience mentions that Trade and related mobility can increase the impact of shocks by spreading disease, magnifying economic disruptions through value chains, and increasing emissions that contribute to climate change. However, trade can also strengthen resilience by boosting productivity and growth and by increasing access to goods and services to prepare for, cope with and recover from the impact of shocks. Trade can speed up economic recovery, for example when sustained foreign demand helps to compensate for reduced domestic demand. Trade policies are crucial to support the beneficial role of trade, for example by easing trade controls to support the flow of emergency goods, and by limiting the use of export restrictions to promote the availability of essential goods globally. A diversified trade and production structure make it more likely that trade can play a positive role in coping with shocks.

Trade can.....

- A:-Increase the impact of shocks by limiting the spread of disease
 - B:-Reduce the emissions thus to prevent climate change
 - C:-Prevent economic growth
 - D:-Speed up economic recovery owing to increased foreign demand
- Correct Answer:- Option-D
